

Deliverable 2

SiteSync

SiteSync Site Management

Team Number 13

- Anthony Mancina (N01643670)
- Chris Garcia(N01371506)
- Ngoc Le (N01643011)
- Tyler Meira (N01432291)

Table Of Contents

Name	Student ID	Github ID	Signature	Effort
Tyler Meira	N01432291	95157172		
Chris Garcia	N01371506	196109735		
Ngoc Le	N01643011	157065810		

1. Project Scope and goals that are targeted in this course.

Develop a mobile application integrated with fingerprint hardware that accurately records the login and logout times of construction workers on residential sites.

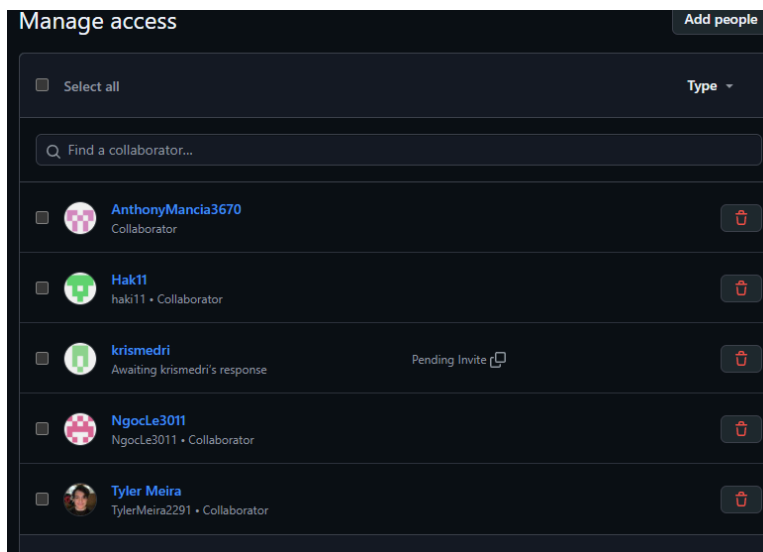

The system will improve attendance tracking, reduce manual errors, and provide site managers with real-time reporting.

2. GitHub Repo link and strategy. All members must contribute to the repo. Explain the github strategy.

<https://github.com/ChristopherGarcia1506/SiteSync>

Our github strategy is to have each member develop on their own branch of our project, then merge each of the branches together into the main branch, to help ensure version conflicts are kept to a minimum if multiple members of our team are working on something at the same time.

3. Verify the link is working.
4. Screenshot showing you have invited your hardware prof to the repo (explain to your hardware prof, the process to accept your invitation)\

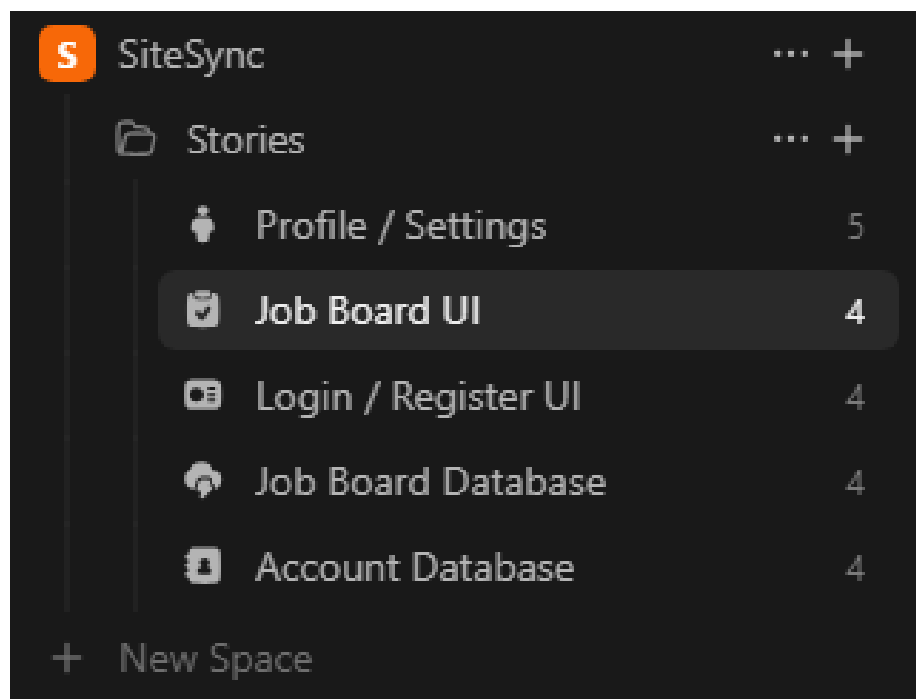

5. Each member must have a minimum of 5 commits.
6. Marks deducted for members who are not meeting the minimum 5 commits (i.e. if only 4 commits, 20% percent deducted, ...etc.).
7. Minimum of 5 stories and each story must be split to minimum of 4 tasks. Use one of the online tools to build the stories and tasks, i.e. use Trello

(<https://trello.com/en>) or Monday (<https://monday.com/>) or any other appropriate tool

i.e. <https://www.notion.com/> <https://clickup.com/>

9. Take a screenshot showing clearly the stories and breakdown of tasks with owner, status, start/end date, size, and priority.

PLANNING4Add Task

Name	Assignee	Due date	Priority	
Create db structure	TM	10/5/25	Urgent	
Pull user info from db	TM	10/5/25	Normal	
Save user info to db	TM	10/5/25	Normal	
Link db to android studio	TM	10/5/25	Normal	
Add Task				

TO DO0Add Task

Name	Assignee	Due date	Priority	
Add Task				

10. Refer to lecture 4 on how to build a dashboard for the stories and tasks.

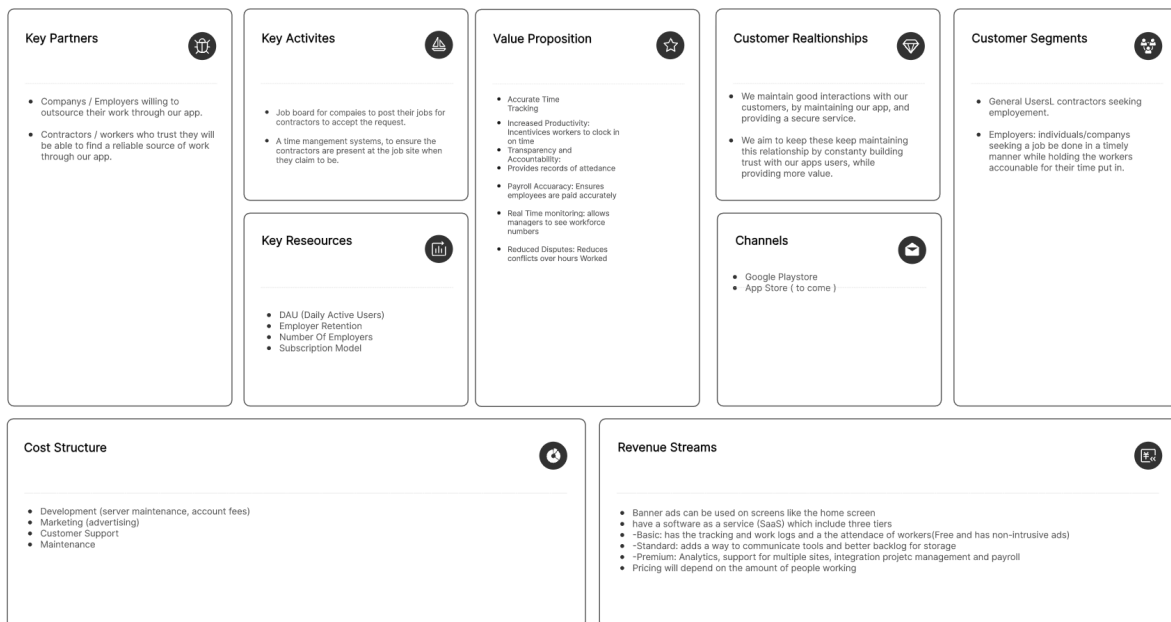

11. Tasks which are marked done, explain how did you meet the DoD criteria.

12. List of items you included in the DoD.

13. Business Model Canvas, all the 9 fields are clearly shown and Explained.

Site Sync Buisness Model

Type something or 'f' for commands

14. Create Gantt chart showing main milestones and work

progress. You can use <https://try.airtable.com/gantt2> or any other tool. Do the research and select the proper tool. Excel or word will not be accepted.

15. The Gantt chart must show the work for a minimum of 10

components and the time lines. Focus on main components and not every small task.

16. Gantt chart should show the project from start to end.

17. Refer to Week 5 material, on what questions the Gantt chart

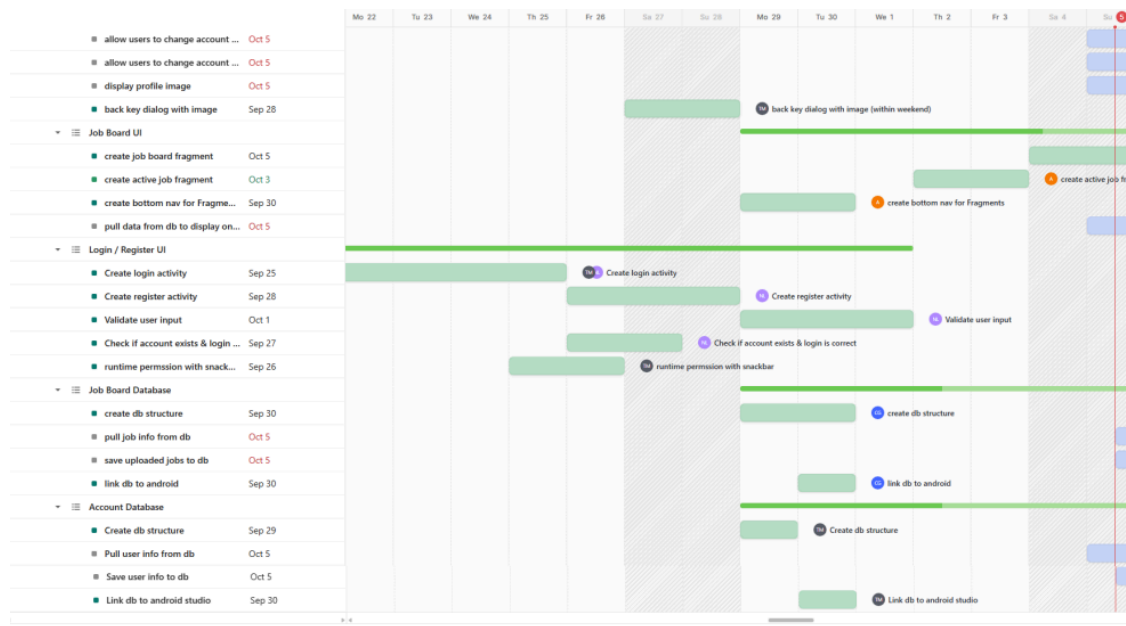

answers, i.e. project timeline, assignee, ...etc.

18. Gantt chart is different than your Scrum Dashboard, and

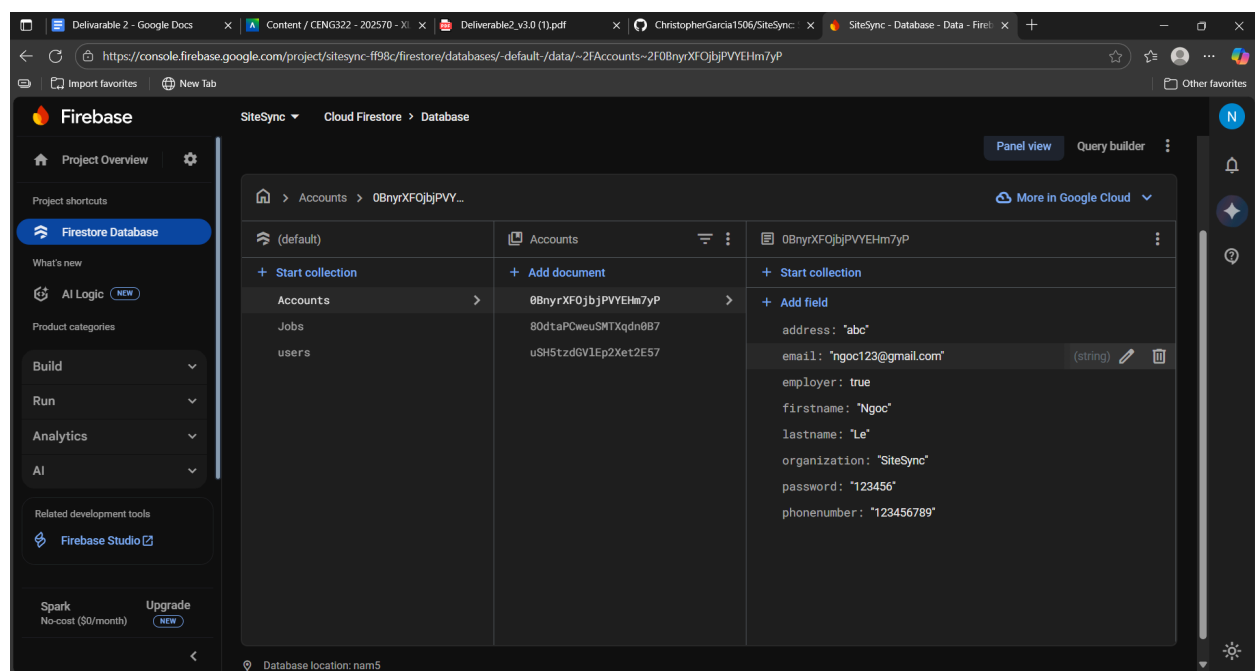

does not show the small task's details.

19. Multiple screenshots of the Gantt charts showing the

Details.

20. Screenshot showing you have created the DB on the cloud,
with some details and type of DB used.

21. Explain how you are planning to use the DB.

- We use firebase to store user login information and jobs.

22. Coding work progress since deliverable 1. What additional

features/functionality added since deliverable 1.

- We added more screens such as Login Screen, Register Screen, Home Screen, Job Screen, and added UI and functionalities for them.

23. A Table records the daily stand-ups outcome, use any tool

you like, include a screenshot into the document. Table, include date and info. Show minimum of 3 meetings.

First meeting	September 23, 2025	We divided the tasks for the deliverable.
Second meeting	September 29, 2025	This meeting is for checking up on progress.
Third meeting	October 5, 2025	We reviewed everything and prepared for the presentation.

24. Document what design principle you used, copy the code and comment on it.

Design Principle: Separation of Concerns

Example:

```
protected void askForPermission() {
```

```

        if
(ContextCompat.checkSelfPermission(this,Manifest.permission.POST_NOTIFICATIONS
) != PackageManager.PERMISSION_GRANTED){

            if(Build.VERSION.SDK_INT >= Build.VERSION_CODES.TIRAMISU){

requestPermissionLauncher.launch(Manifest.permission.POST_NOTIFICATIONS);

            }

        }

        else{

            showNotification(getString(R.string.permission_granted),
getString(R.string.dismiss));

        }

    }

}

@Override

protected void onCreate(Bundle savedInstanceState) {

    super.onCreate(savedInstanceState);

    setContentView(R.layout.login_screen);

    askForPermission();

```

In onCreate, we call the askForPermission() method which is created outside.

25. Create a subfolder called deliverable2 under docs in the repo and add the pdf file.
